**Key Personnel:** Walter Amory, P.E.  
Patrick G. Brennan, P.E.

## PROJECT DESCRIPTION

Our work for the Marshfield Department of Public Works included a drainage study to determine existing and potential build-out runoff conditions on Telegraph Hill and down-gradient properties (about a 36-acre tributary area). Upon completing the study we designed and inspected construction of a municipal drainage system to convey runoff from Telegraph Hill and South River Street to a wetland area tributary to the South River. The project included approximately 2,600 linear feet of drain pipe and 1,000 linear feet of water quality swales.
